Jamal Alqbail

Cybersecurity Specialist

jamalalqbail@gmail.com | +962 795246652 | LinkedIn | GitHub | Amman, Jordan

SUMMARY

Cybersecurity specialist skilled in network security, secure software development, and digital forensics. Experienced in building security tools, encryption systems, and penetration testing. Focused on privacy, automation, and resilience.

EDUCATION

The World Islamic Science & Education University (W.I.S.E) **Amman, Jordan**

*B.Sc. in Confidentiality and Security of Information and Networks 2020 – 2026 | Rating: **Very Good** (79.3%)*

- **Python Programming Certificate** – Al-Azimah Academy for Consulting and Training *70-hour course (Apr 2025)*
- **Cybersecurity Certificate (CC Course Pre-assessment)** – Issued Sep 2025, *Valid for 3 years*
- **Masar Training for University Students** – National Cyber Security Center (NCSC) *200 hours / 6 weeks (2025)*

SKILLS

- **Cybersecurity & Networking:** Penetration Testing, Vulnerability Assessment, OWASP Top 10, Network Reconnaissance, Payload Obfuscation, Digital Forensics, Encryption.
- **Programming:** Python (Advanced), Java (Intermediate).
- **Tools & Frameworks:** Kali Linux, Nmap, Wireshark, Metasploit, Autopsy, VS Code.
- **Soft Skills**: Communication, Collaboration, Time Management, Critical Thinking, Problem Solving.

RELEVANT EXPERIENCE

Masar Training for University Students – *National Cyber Security Center (NCSC)* **Remote *Cybersecurity Trainee | 200 hours | Score: 100%*** *July 2025 - September 2025*

- Completed hands-on training in ethical hacking, SOC operations, digital forensics, and incident response.
- Performed full penetration testing workflows—reconnaissance, exploitation, reporting, and remediation planning.
- Developed **RedPilot**, a Python-based GUI tool automating network scanning and exploit orchestration with safety controls.
- Performed OWASP Top 10 web-app testing using Burp Suite, and sqlmap; documented key findings and fixes.
- Utilized professional toolchains including **Kali Linux**, **Burp Suite**, **Nmap**, **Metasploit**, **Nessus**, and **Autopsy**.

PROJECTS

Secure Chat App (Local E2EE Communication) GitHub Link

- Python-based chat application using TLS 1.3, ECDH key exchange, and AES-GCM.
- Features: USB authentication, steganography, and secure file shredding.
- Partnered with teammates to plan, and code the project, ensuring effective task distribution and communication.

Anti-Forensic Tool GitHub Link

- Engineered a military-grade data sanitation engine implementing Simple Random, US DoD 5220.22-M, RCMP OPS-II, and **Gutmann** algorithms to guarantee irreversible file destruction and thwart advanced forensic recovery techniques.
- Developed automated anti-forensic logic to scrub system artifacts, manipulate file metadata (timestomping), and sanitize free space, effectively eliminating digital footprints and disrupting timeline analysis.
